

Augment Inc. is an AI software company. We build and run production pipelines with AI agents in three areas: speech and audio, document and data, and computer vision. Each pipeline is delivered as software the customer owns, or run for the customer as a managed service.

CORE COMPETENCIES

Speech and audio

Text into finished audio, recordings into text, and spoken conversations handled by voice agents.

Text-to-speech production · Transcription · Voice agents

Document and data

Documents converted between formats, data extracted and validated, and results packaged to the standard the recipient requires.

Conversion · Extraction · Validation · Packaging to standards

Computer vision

Images and video checked for defects, and what is there verified against what should be there.

Inspection · Verification

DIFFERENTIATORS

- **Agent-built pipelines.** We build pipelines with AI agents, which makes them faster and cheaper to build.
- **Customer-owned code.** When we deliver software, the customer owns the code and can run it in its own environment.
- **Standards-first validation.** We turn the standard the output must meet into automated checks first, and every output passes them before delivery.

DELIVERY

Software the customer owns, or a managed service that we run.

LEADERSHIP

Rithwik (Ricky) Pattikonda · Chief Executive Officer

Formerly at Google; Y Combinator-backed founder; previously founded and grew a consumer travel software company.
